Geo 20F

Mrs. Clark

Well guys, this is it. This is the final package for Geo 20F. You will notice that I have included a variety of topics from climate change and Arctic gardening to COVID-19 and school, travel, and the 2020 Tokyo Olympics. All connect to us and our geography; all are relevant in the world we find ourselves living in today.

You will also notice that the articles range from easy to more difficult, so if you have trouble with some, do the parts you can. I have tried to include something for everyone.

The absolute final deadline for turning in any work (for any subject) is **Friday, June 19** but don't leave your school work to the last minute! The buses will not be delivering/picking up that late so the sooner you get your work turned in the better. Do not miss this opportunity to bring that mark up!

One issue that I have not covered with you is Canada's fresh water crisis. It is not in our textbook but I always like to examine this issue- it is yet another crisis that has long been ignored by our government(s) because "It is just First Nations' communities" and so tends to be low on the list of priorities. I have enclosed some readings for you (there will not be any questions) and encourage you to check out the Shoal Lake 40 water crisis on YouTube: there are some very eye-opening videos! "As Long as the Water Flows" is especially interesting. Clean drinking water is a basic human right- something that most of us take for granted. Some of you have firsthand experience with the lack of potable water.... This truly is another one of our country's dirty little secrets! If you do nothing else out of this package, please read these articles- it is something that all Canadians should know about.

That's it.

Peck away at these articles and be sure to hand in any work you have done at all.

Get some fresh air. Be well.

Take care.

Mrs. Clark
